DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

- 2. Claim 4 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
- 3. Regarding claim 4, the phrase "such as" renders the claim indefinite because it is unclear whether the limitations following the phrase are part of the claimed invention. See MPEP § 2173.05(d).

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 5. Claims 1-3 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Haraguchi (U.S. Pat. No. 4,943,092).

With respect to claim 1, Haraguchi discloses a suspension arm structure for attaching left and right suspension arms to a subframe which is mountable to a main frame of a vehicle body, where a crossmember (member between 12R and 12L) extends transversely of the subframe (10). Left and right mounting parts (20L and 20R) are used to mount the left and right

suspension arms thereto, and the mounting parts are integrally formed with left and right end potions of the cross member, respectively (column 3, lines 43-48).

With respect to claim 2, the subframe is formed into a substantially rectangular shape (Fig. 1) with left and right side frame members (member between 14L and 12L, and member between 14R and 12R) and front and rear crossmembers (member between 12R and 12L, and member between 14R and 14L), where the front crossmember extends between the left and right side frame members.

With respect to claim 3, Haraguchi discloses that the left and right mounting members (20L and 20R) are provided at the crossmember (member between 12R and 12L) and extend downwardly (Fig. 1) from the crossmember for mounting the left and right suspension arms thereto, and a connecting member (40) interconnects the left and right mounting members.

Claim Rejections - 35 USC § 103

- 6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7. Claim 4 is rejected under 35 U.S.C. 103(a) as being unpatentable over Haraguchi in view of Matsumura et al. (JP 11-198623). Haraguchi discloses the claimed invention as discussed above but does not disclose that the connecting member has a bottom surface located below a bottom surface of a member to be protected. Matsumura et al. discloses that a fuel tank is mountable on the suspension system and lies above the front cross member (22 as shown in Fig. 12). Therefore, it would have been obvious to one having ordinary skill in the art at the time the

et al. to have the bottom surface of a member be protected by the bottom surface of the connecting member so the forces acting on the underside of the vehicle would act on the connecting member rather than the crossmember, which would increase the protection of the member to be protected, in this case a fuel tank.

Conclusion

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ziech et al. (U.S. Pat. No. 6,866,295 B2), Suzuki (U.S. Pat. No. 6,494,472 B2), Satou (U.S. Pat. No. 6,623,020 B1), Barber et al. (U.S. Pat. No. 6,739,624 B2), Lindsay (U.S. Pat. No. 2,901,266), Kocer et al. (U.S. Pat. No. 6,428,046 B1), Kunert et al. (U.S. Pat. No. 6,511,096 B1), and Ziech et al. (U.S. Pat. No. 6,733,021 B1) all disclose similar subframes for mounting suspension arms.
